

Se verificar en packages.config la version a instalar:

```
<package id="Microsoft.AspNet.WebApi.Client" version="5.2.3" targetFramework="net45" />
```

```
PM> Install-Package Microsoft.AspNet.WebApi.Cors -Version 5.2.3
Attempting to resolve dependency 'Microsoft.AspNet.WebApi.Core (≥ 5.2.3 && < 5.3.0)'.
Attempting to resolve dependency 'Microsoft.AspNet.WebApi.Client (≥ 5.2.3)'.
Attempting to resolve dependency 'Newtonsoft.Json (≥ 6.0.4)'.
Attempting to resolve dependency 'Microsoft.AspNet.Cors (≥ 5.2.3)'.
```

Posteriormente modificar WebApiConfig.cs

```
using System.Web.Http.Cors;
namespace WebApplication1
{
    1 reference
    public static class WebApiConfig
    {
        1 reference
        public static void Register(HttpConfiguration config)
        {
            // Web API configuration and services
            // Configure Web API to use only bearer token authentication.

            config.SuppressDefaultHostAuthentication();
            config.Filters.Add(new HostAuthenticationFilter(OAuthDefaults.AuthenticationType));

            // Web API routes
            config.EnableCors();
            config.MapHttpAttributeRoutes();

            config.Routes.MapHttpRoute(
                name: "DefaultApi",
                routeTemplate: "api/{controller}/{id}",
                defaults: new { id = RouteParameter.Optional }
            );
        }
    }
}
```

Posteriormente en el controller Habilitar los cors

```
[EnableCors(origins: "*", headers: "*", methods: "*")]
0 references
public class ValuesController : ApiController
{
}
```
